

Many bespoke commissions start with a client who is trying to reproduce a casting in the style or shape of a pattern which is no longer available. Hargreaves' in house technical team will be able to work with either a sample from site to replicate an existing casting or a detailed drawing to create a product to a completely new design.

Hargreaves Drainage's Halifax site includes a pattern making shop, foundry and fabrication facilities with a 55,000 sq. ft. distribution centre carrying over £2m stock at any given time. We have the experience and capability to manufacture bespoke castings and fabricated products to support our comprehensive standard ranges and meet customer requirements.

Renovation or extension of a period property can require, for example, radius gutters to match the specific curvature of the building and design of gutter or ornamental hopper heads to match existing installations like for like. In most cases drawings are not available, our customer service team will work closely with the client and manage the order throughout each stage of the project ensuring the most cost effective production options are selected and quality standards and delivery deadlines are met satisfactorily.
